iOS Demo App

Overview

Create a simple task management CRUD application. Data should be stored locally using Core Data framework. App should be written in swift.

Completed assignment should be delivered by providing a link to a GitHub/Bitbucket repository.

Requirements

- Each task contains title and description
- A screen with the list of all tasks
- A details screen showing more information about specific task
- A screen for creating new tasks
- Delete task functionality

Bonus points

- Search feature which will filter the list of all tasks
- Support reordering of tasks
- Adaptive UI
- Wow factor
